

Indoor Localization App: User Manual

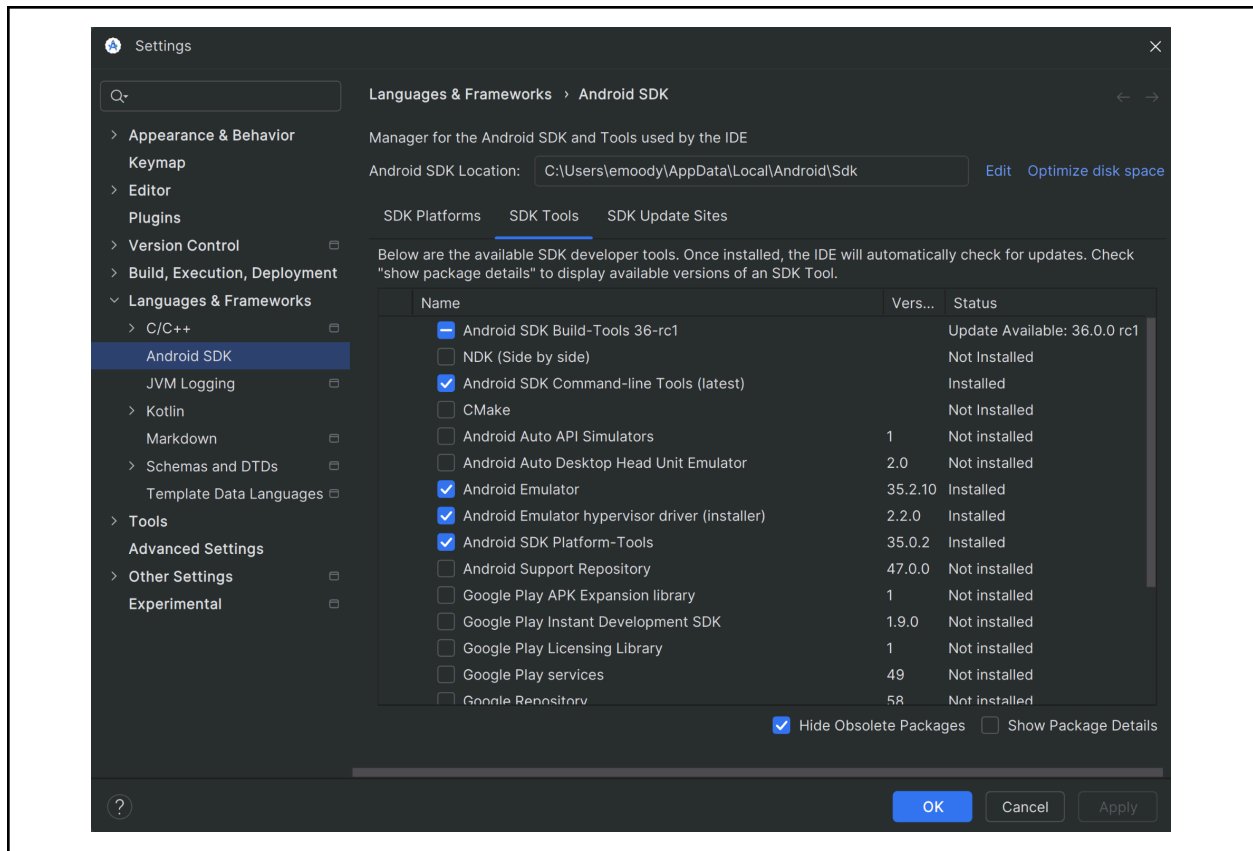

This document serves as a user manual for the mobile application in development for 8th Street Community. The application will allow the user to view his/her location history, watch trends, and view reminders to remain on-task.

This application has been tested on a Google Pixel 5 5G and a Google Pixel 8.

How to Install/Develop

- Install Flutter.
- Install Visual Studio Code.
- Install Android Studio.
 - In Android Studio, navigate to *Settings->Languages and Frameworks->Android SDK*.
 - Ensure that the following packages are installed:
 - SDK Platforms: Android 15.0, Android 14.0
 - SDK Tools: Android SDK Build-Tools 36-rc1, Android SDC Command-line Tools (latest), Android Emulator, Android Emulator hypervisor driver (installer), Android SDK Platform-Tools, Intel x86 Emulator Accelerator (HAXM installer) - Deprecated

- Install other dependencies:
 - Java Version 17
 - Ensure that the environment variables on your machine (PATH) point to the correct version of Java.

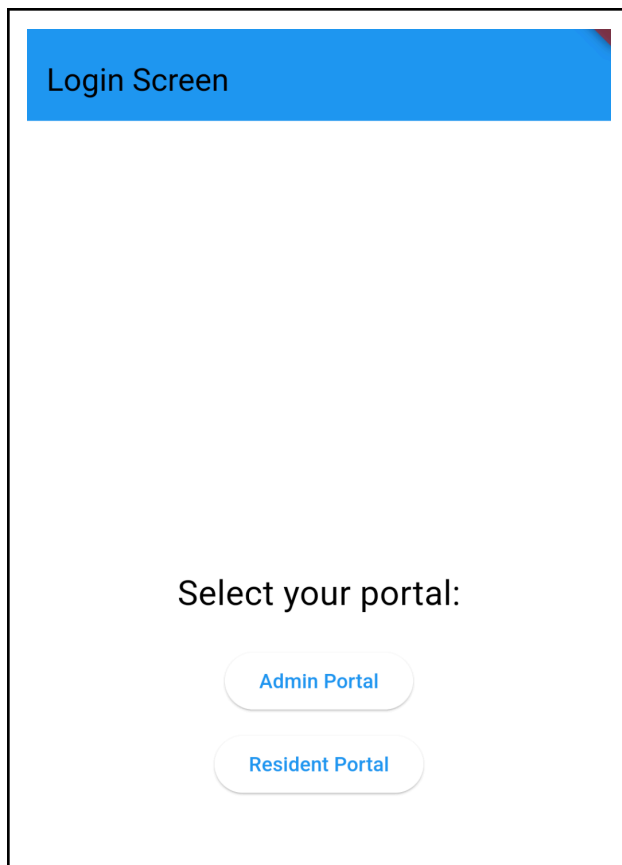

How to run:

- Open Visual Studio Code, open the project.

- In the search bar at the top, type "> Flutter: Run Flutter Doctor" to confirm that your configuration is correct.
- If you would like to test with an Android Emulator, type "> Flutter: Launch Emulator" and select an emulator from the dropdown menu. If one is not listed, you may need to download one from Android Studio.
- If you would like to test with your phone, enable Developer Tools and enable USB debugging on your personal device. Connect to your computer via USB.
- Type "flutter run" in the terminal at the bottom of the screen.

Home Page

The home page serves as a temporary log-in interface for the user. The use of the buttons labeled "Admin Portal" and "Resident Portal" will be used to access the separate interfaces available to each type of user.

Admin and Resident Portals: Permissions Available

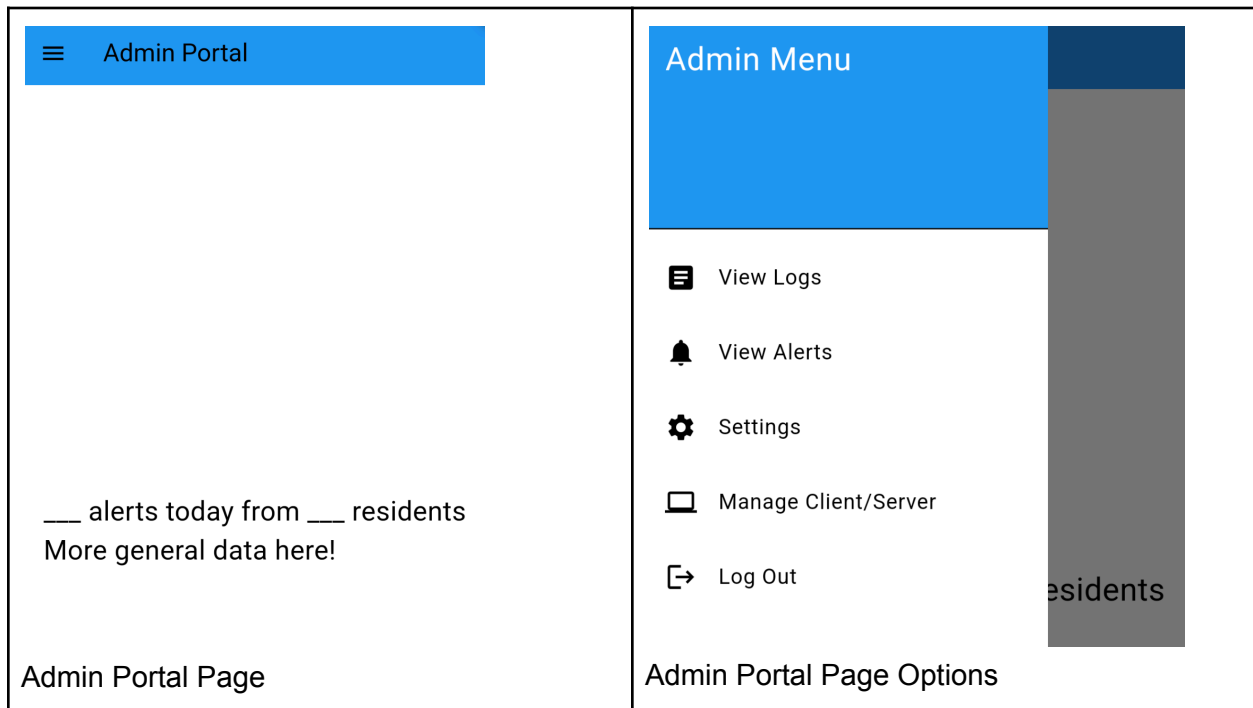

The administrative portal is intended to have data highlights displayed on the page, with a menu bar offering an array of other options. Currently, the options include:

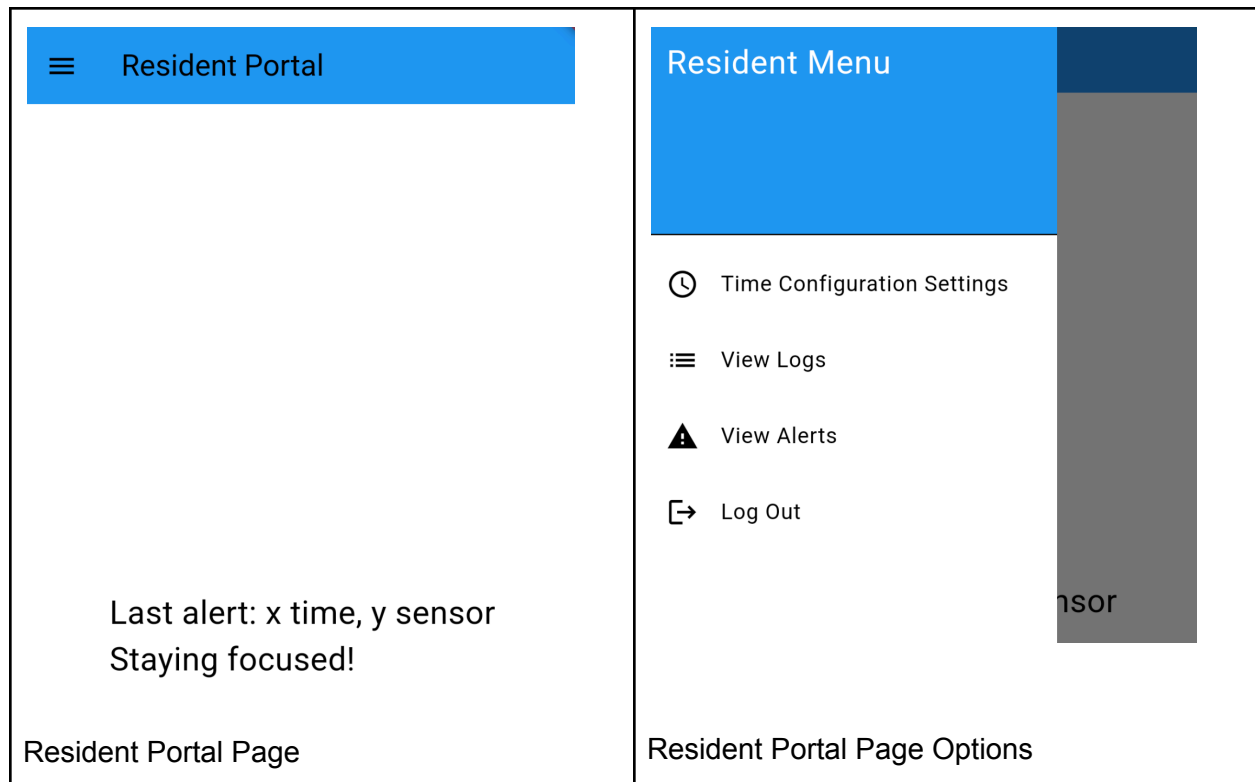

- View Logs

- View Alerts
- Settings
- Manage Client/Server
- Log Out

The resident interface is designed in the same manner, with highlight data focused on the individual displayed on the page. Options include:

- Time Configuration Settings
- View Logs
- View Alerts
- Log Out

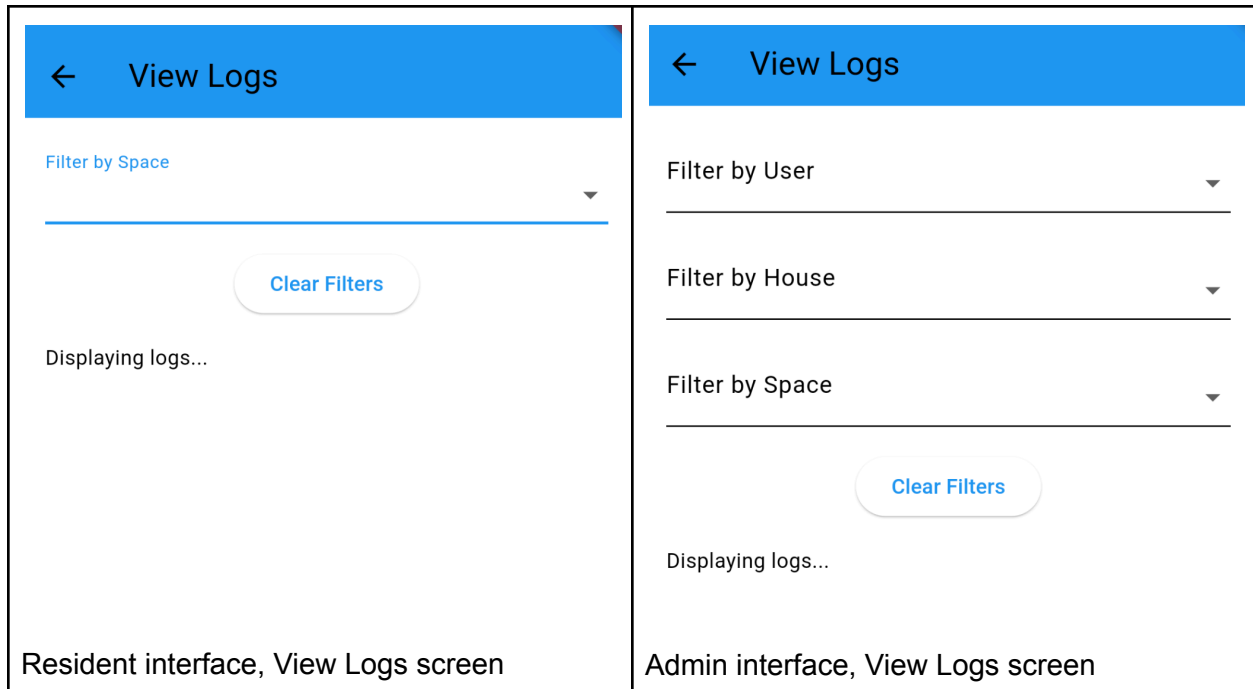

View Logs and View Alerts Pages

These pages will hold verbose data for the resident and administrator. For the resident, the logs page will be a verbose dataset detailing locations that the resident was pinged at throughout the day. The resident will be able to annotate these log entries at will so that administrators can better understand the use of their time. The alerts page will be less thorough— it will maintain a log of the notifications that the resident received whenever they lingered in one place for too long. Entries can be filtered by space in the house.

The administrative version of this page is identical, with the exception of being able to view every residents' logs and alerts. Entries can be filtered by user, house, and space in the house.

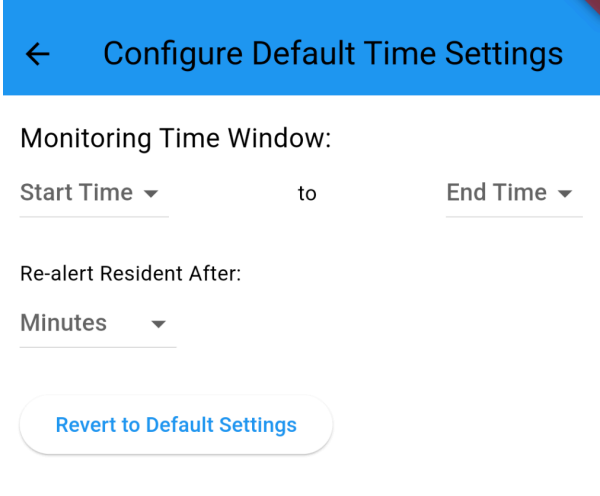

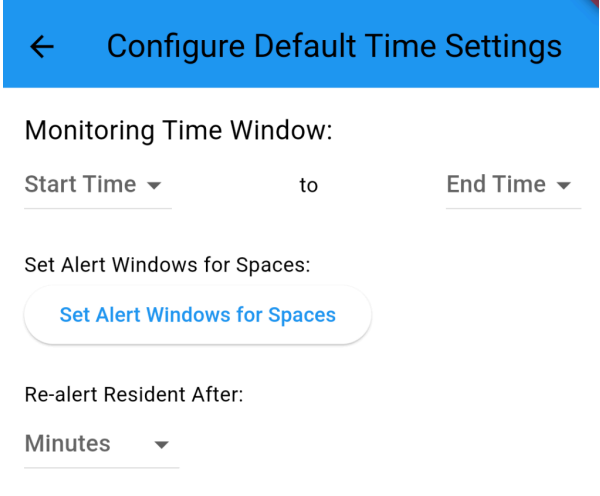

Time Configuration Settings Page

Time configuration settings are available for both admin and resident– residents will find this under the menu bar on the resident portal, and administrators will find it under Settings.

Users have the ability to set the active time window in which the sensors will be tracking their location. They can also configure the time in which to be re-alerted if they have not made a change in behavior.

Administrators can control the same abilities, as well as set acceptable time windows for each space in the house (for example, setting 2 hours as an acceptable time window by the couch).

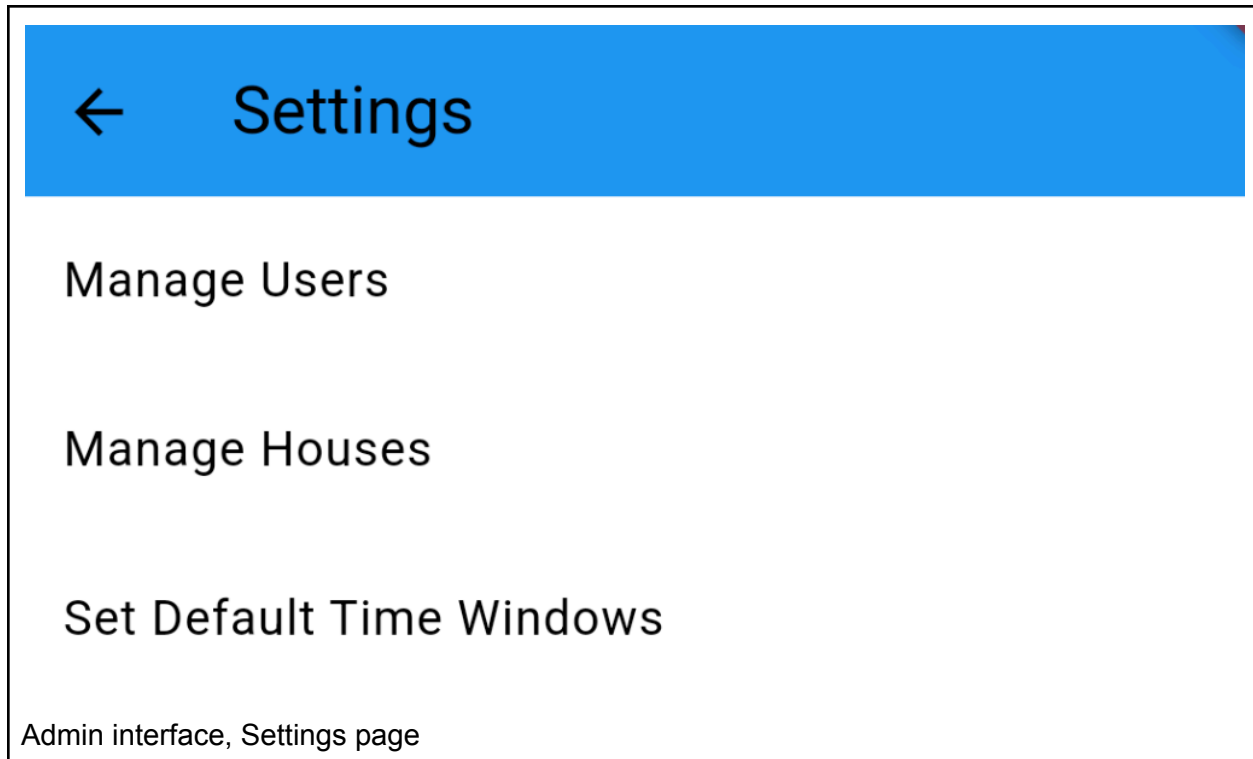

It is important to note that administrators can only set default time windows and re-alert periods. For resident privacy, the resident has the final say for how they are monitored.

 <p>← Configure Default Time Settings</p> <p>Monitoring Time Window:</p> <p>Start Time ▼ to End Time ▼</p> <p>Re-alert Resident After:</p> <p>Minutes ▼</p> <p>Revert to Default Settings</p> <hr/> <p>Please note: For user privacy, you may configure your own time settings but cannot modify global settings.</p>	 <p>← Configure Default Time Settings</p> <p>Monitoring Time Window:</p> <p>Start Time ▼ to End Time ▼</p> <p>Set Alert Windows for Spaces:</p> <p>Set Alert Windows for Spaces</p> <p>Re-alert Resident After:</p> <p>Minutes ▼</p> <hr/> <p>Please note: For user privacy, users may or may not configure their own time settings.</p>

Settings Page

The administrative page has an additional Settings page that lists additional features for managing the houses, residents, and spaces. Options include:

- Manage Users
- Manage Houses
- Set Default Time Windows

Manage Users Page

The Manage Users page will be integrated into a database containing the following data:

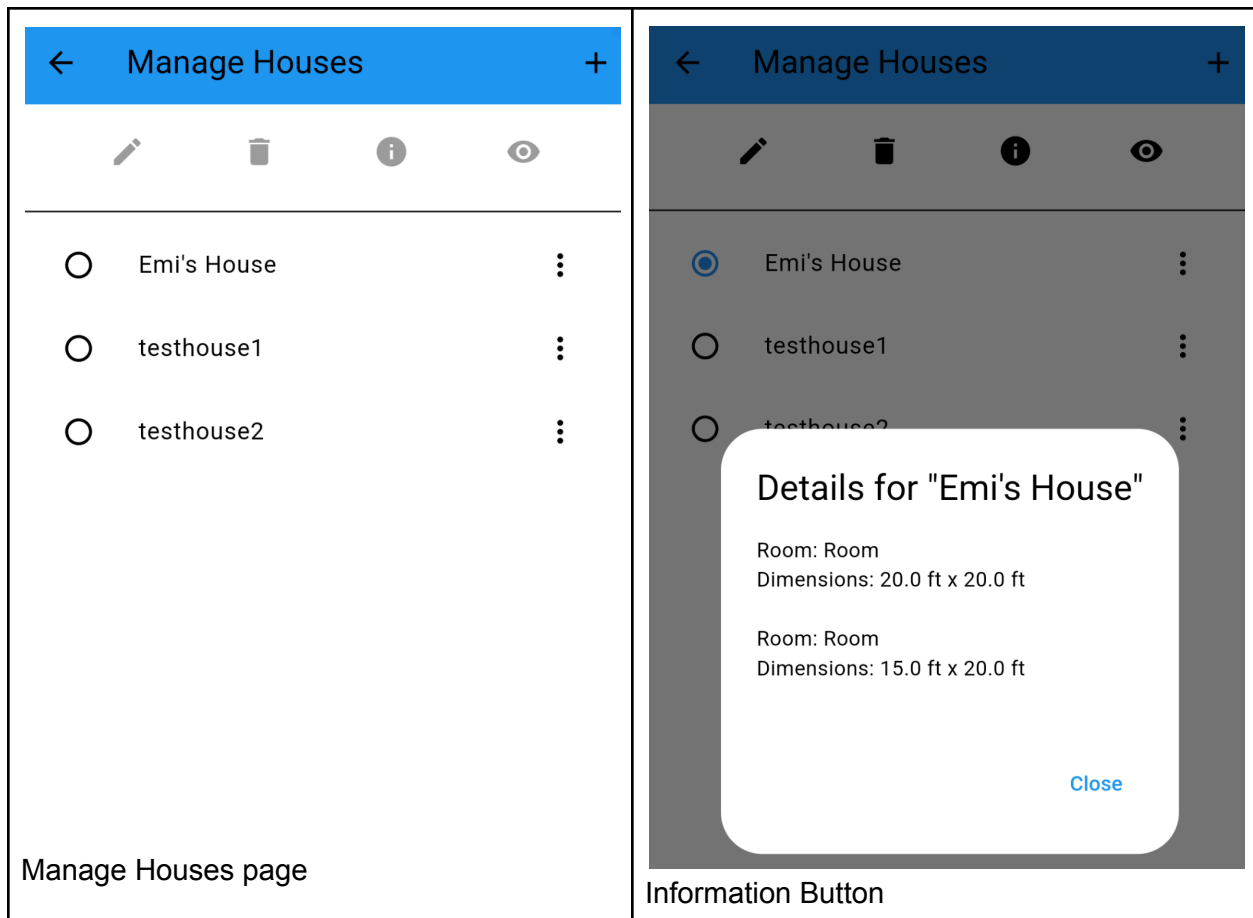

- Name
- UserType
- Email
- House

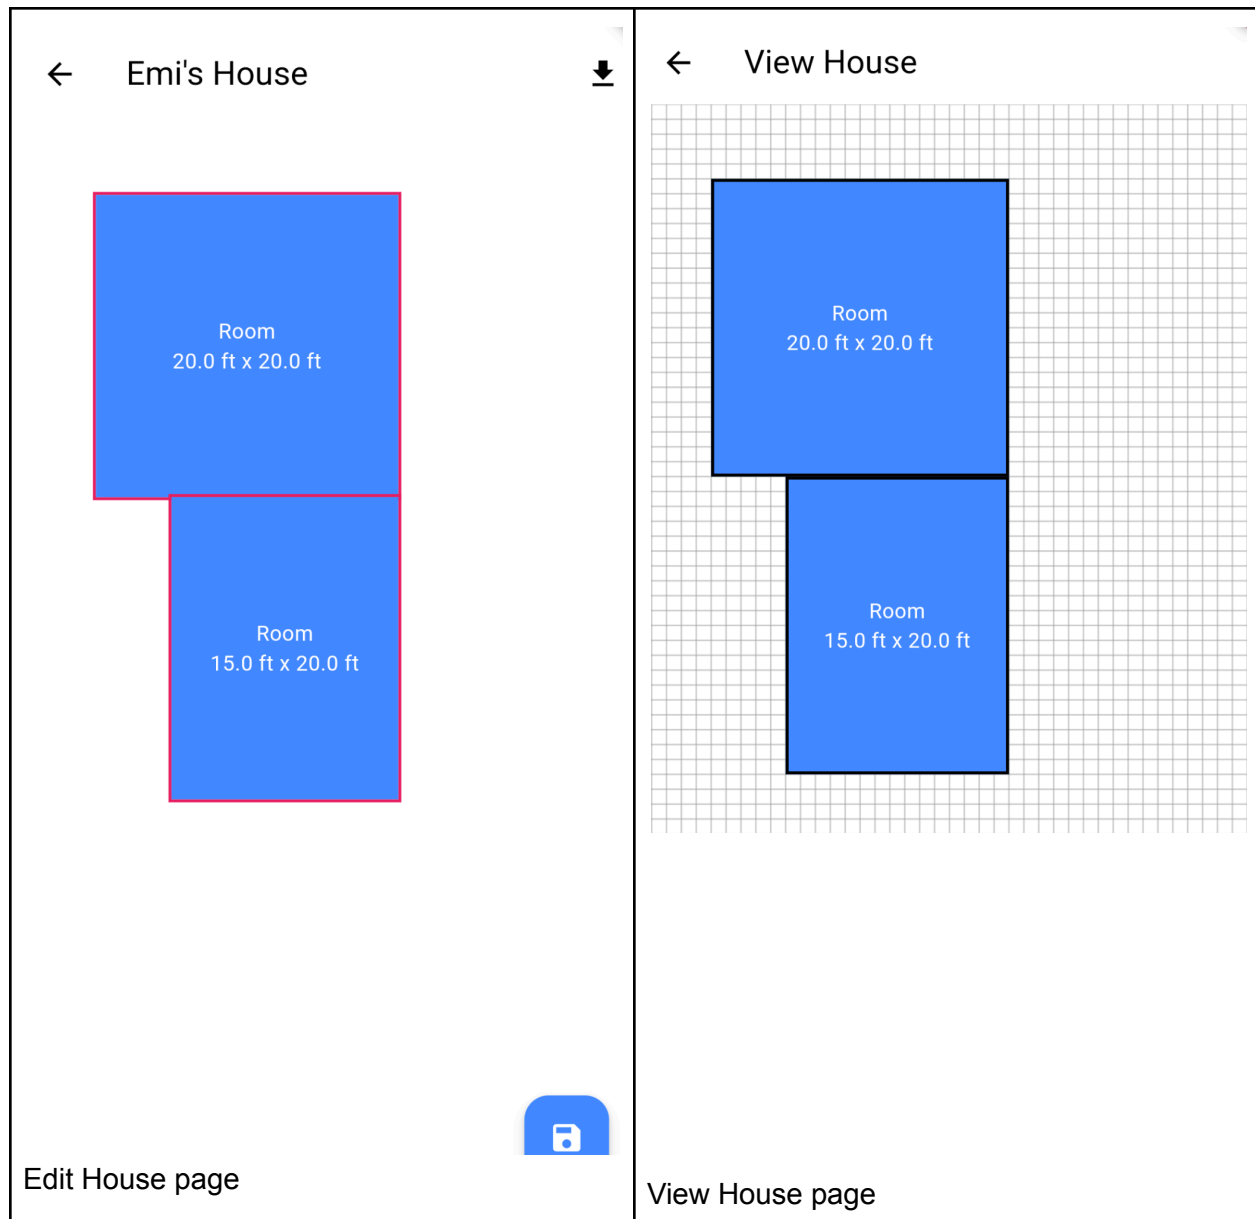

The page implementation currently simulates the full functionality of the database, with pages for adding, editing, viewing and deleting users. Input validation is used to protect the software.

Manage Houses Page

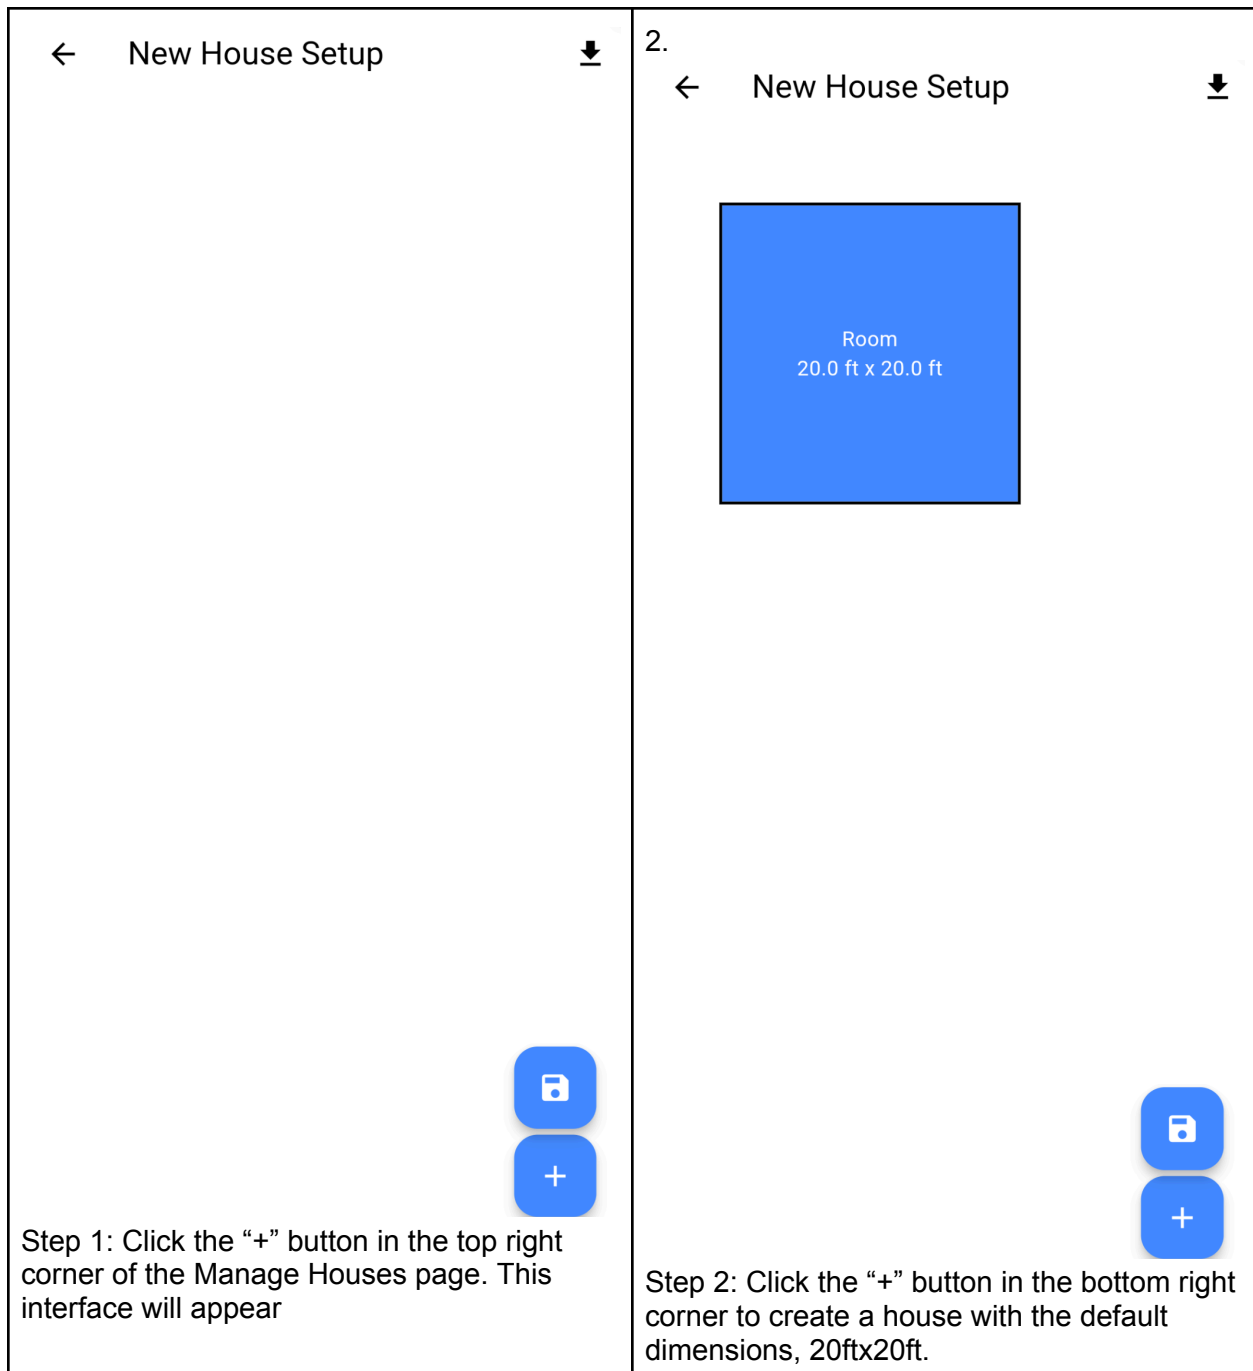

The Manage Houses page allows for administrators to recreate floor plans in the application. Features include creating a new house, editing an existing house, viewing information on the rooms, viewing an uneditable diagram of the house, and deleting a house.

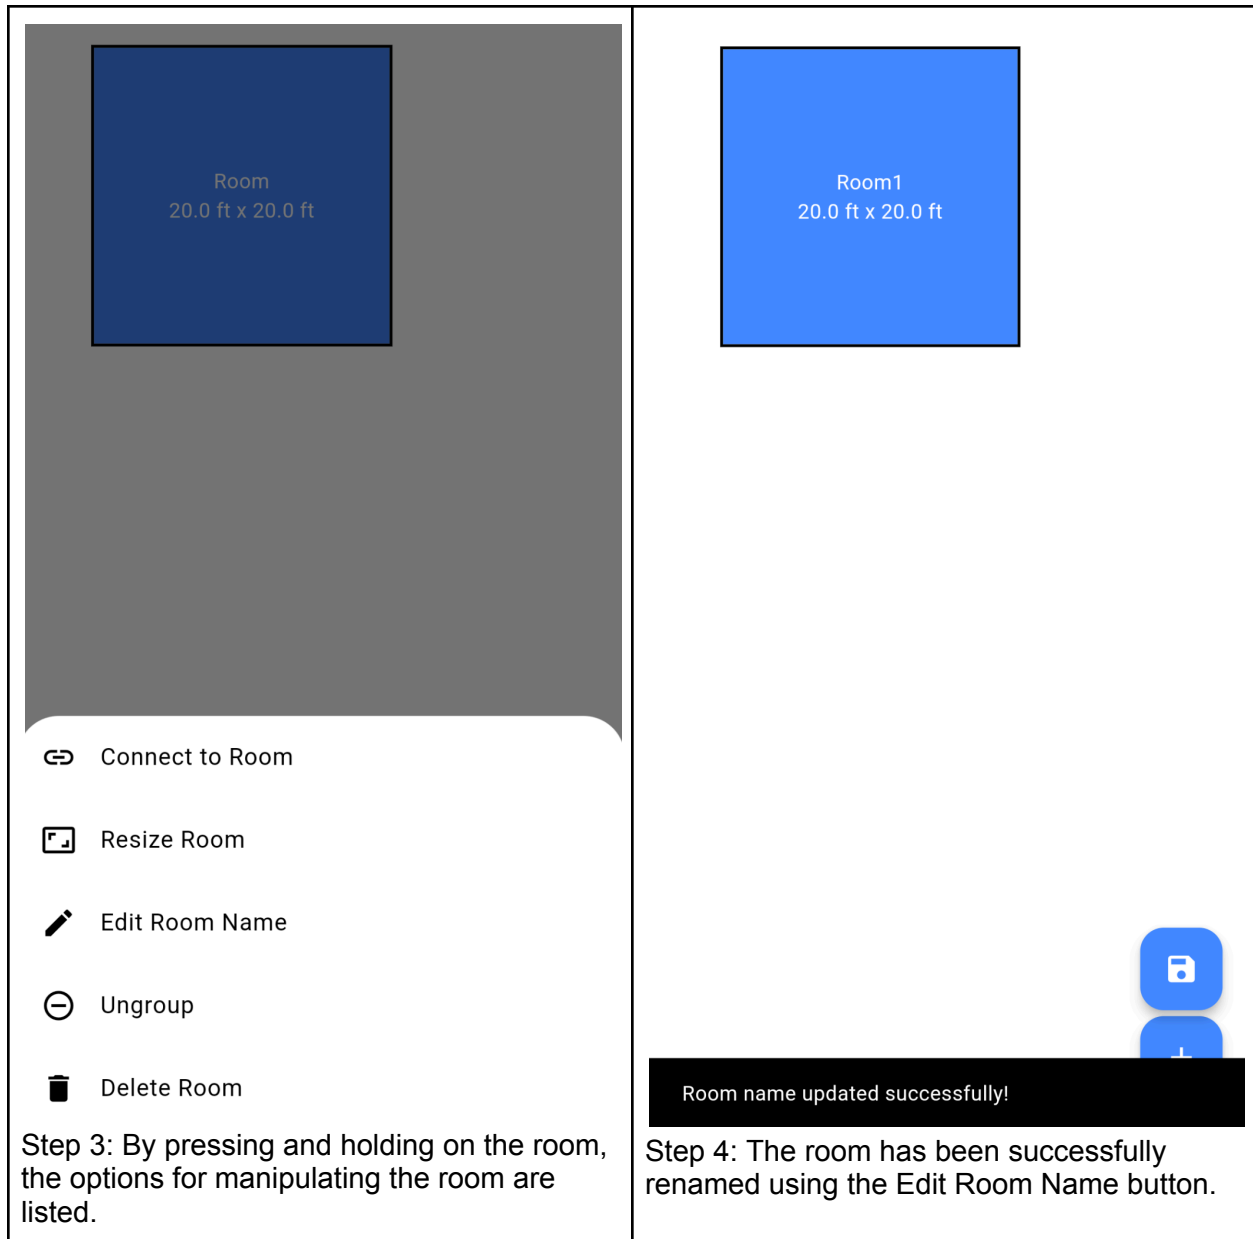

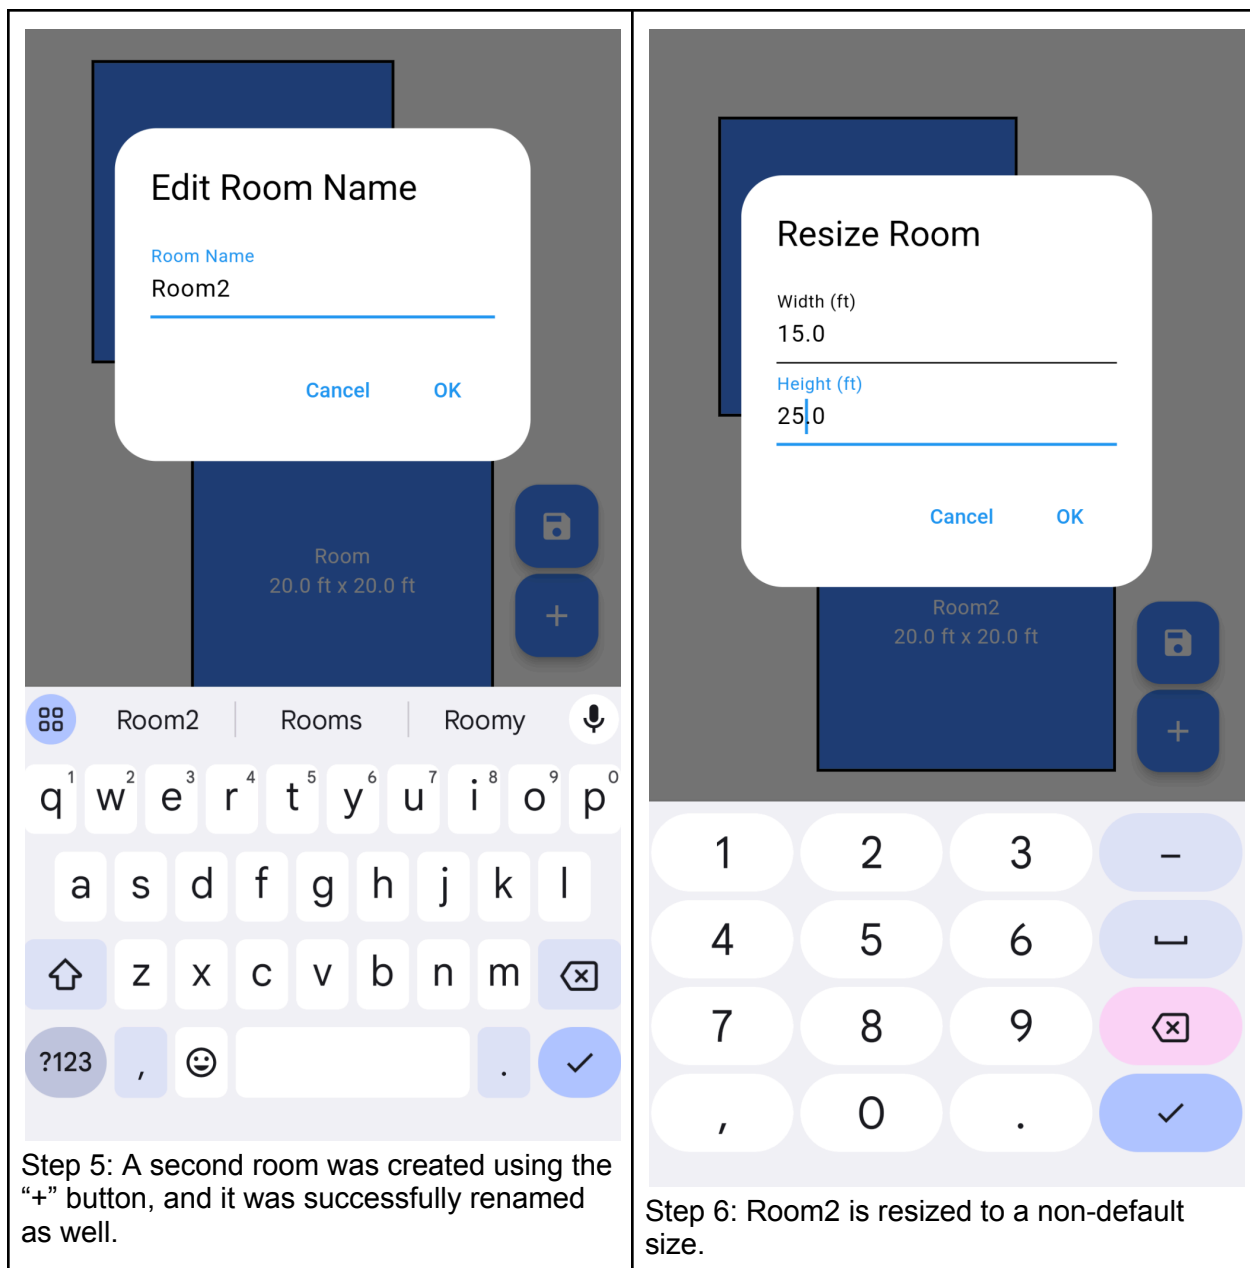

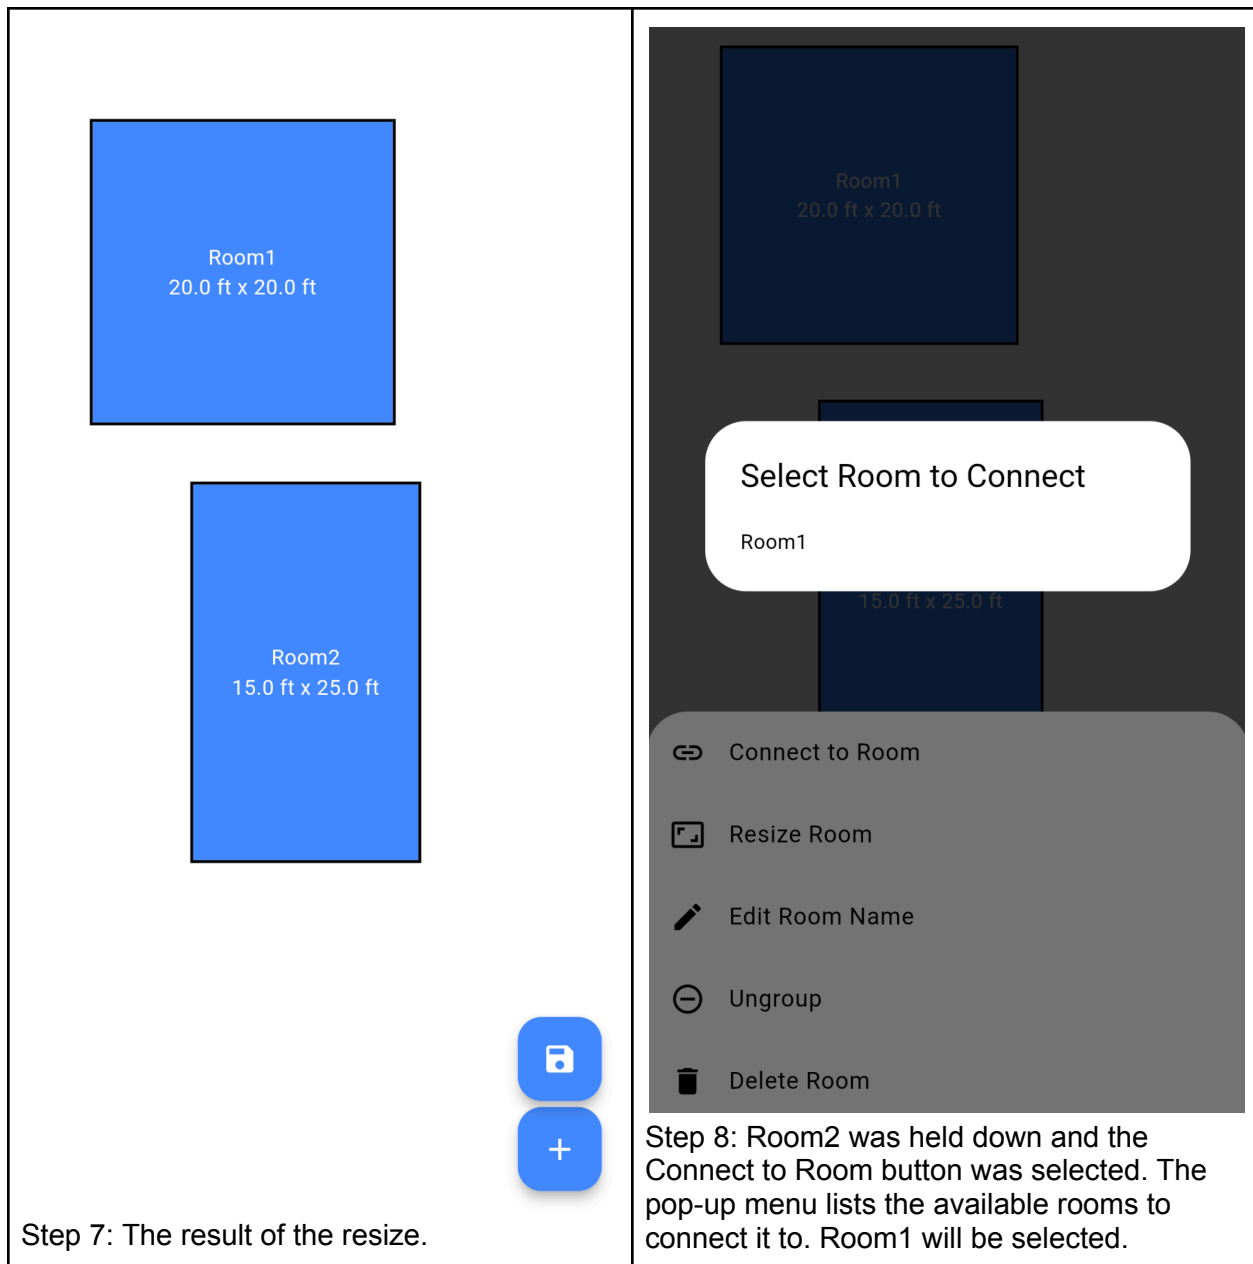

Create a New House Page

This section will walk a user through recreating a floor plan using the Add House feature.

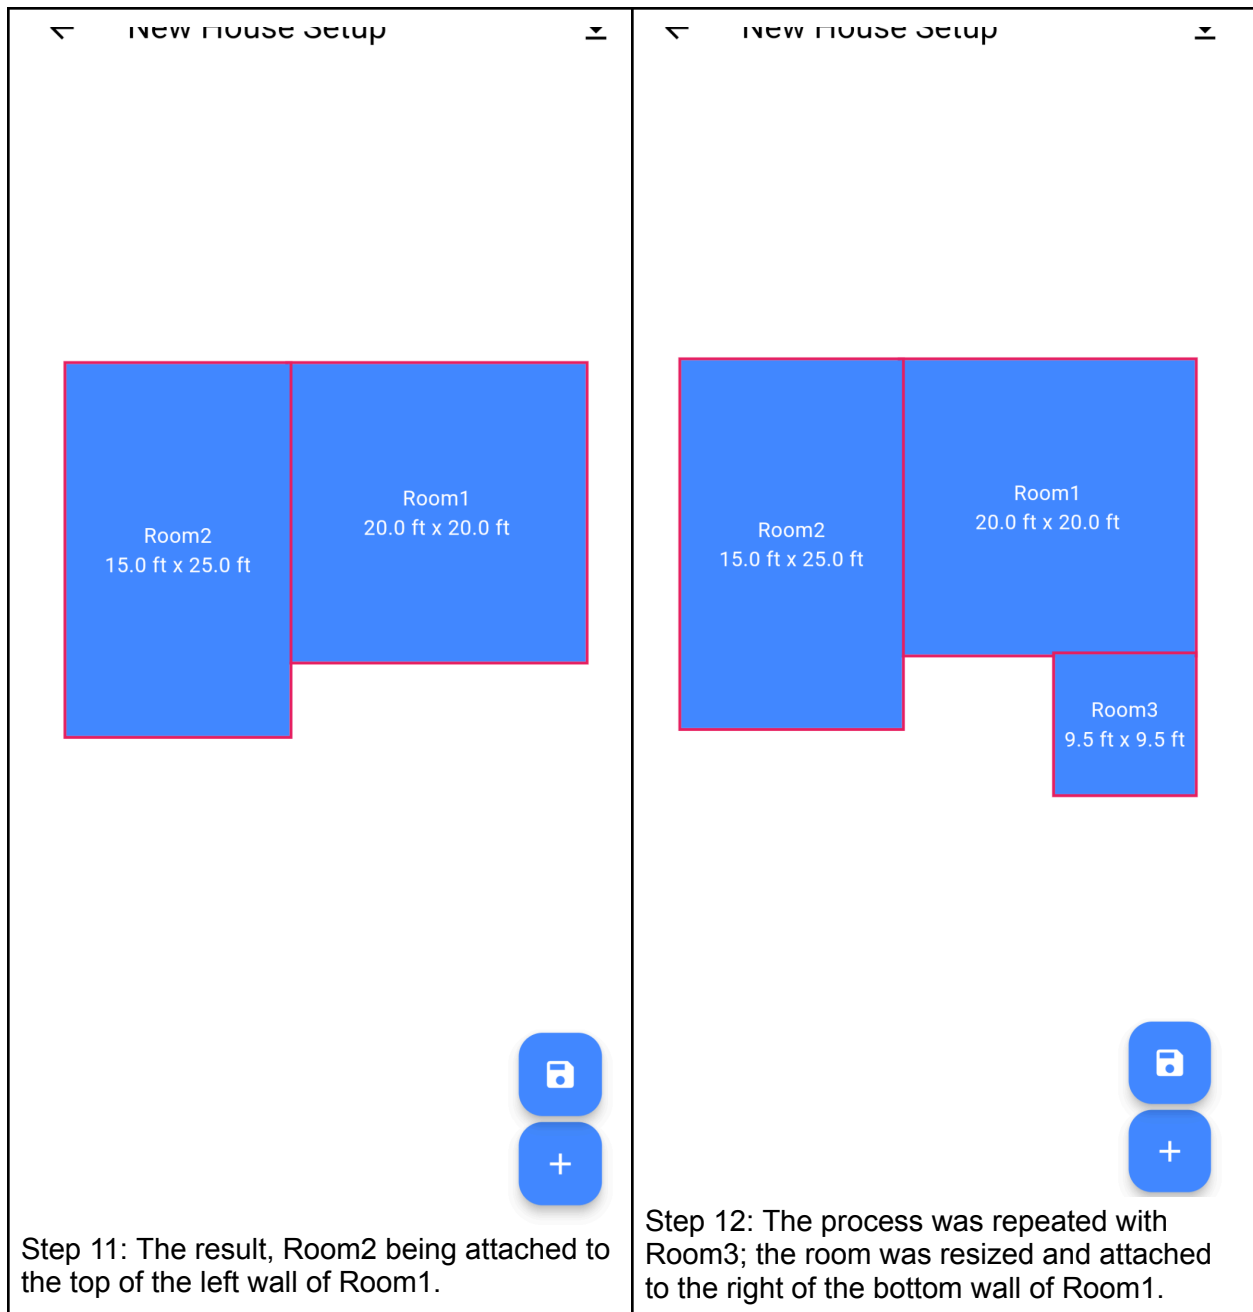

The image displays two sequential steps in a room layout editor. Both screenshots show a dark gray background with two blue rectangular rooms. Room1 is at the top, labeled 'Room1 20.0 ft x 20.0 ft'. Room2 is below it, labeled 'Room2 15.0 ft x 25.0 ft'.

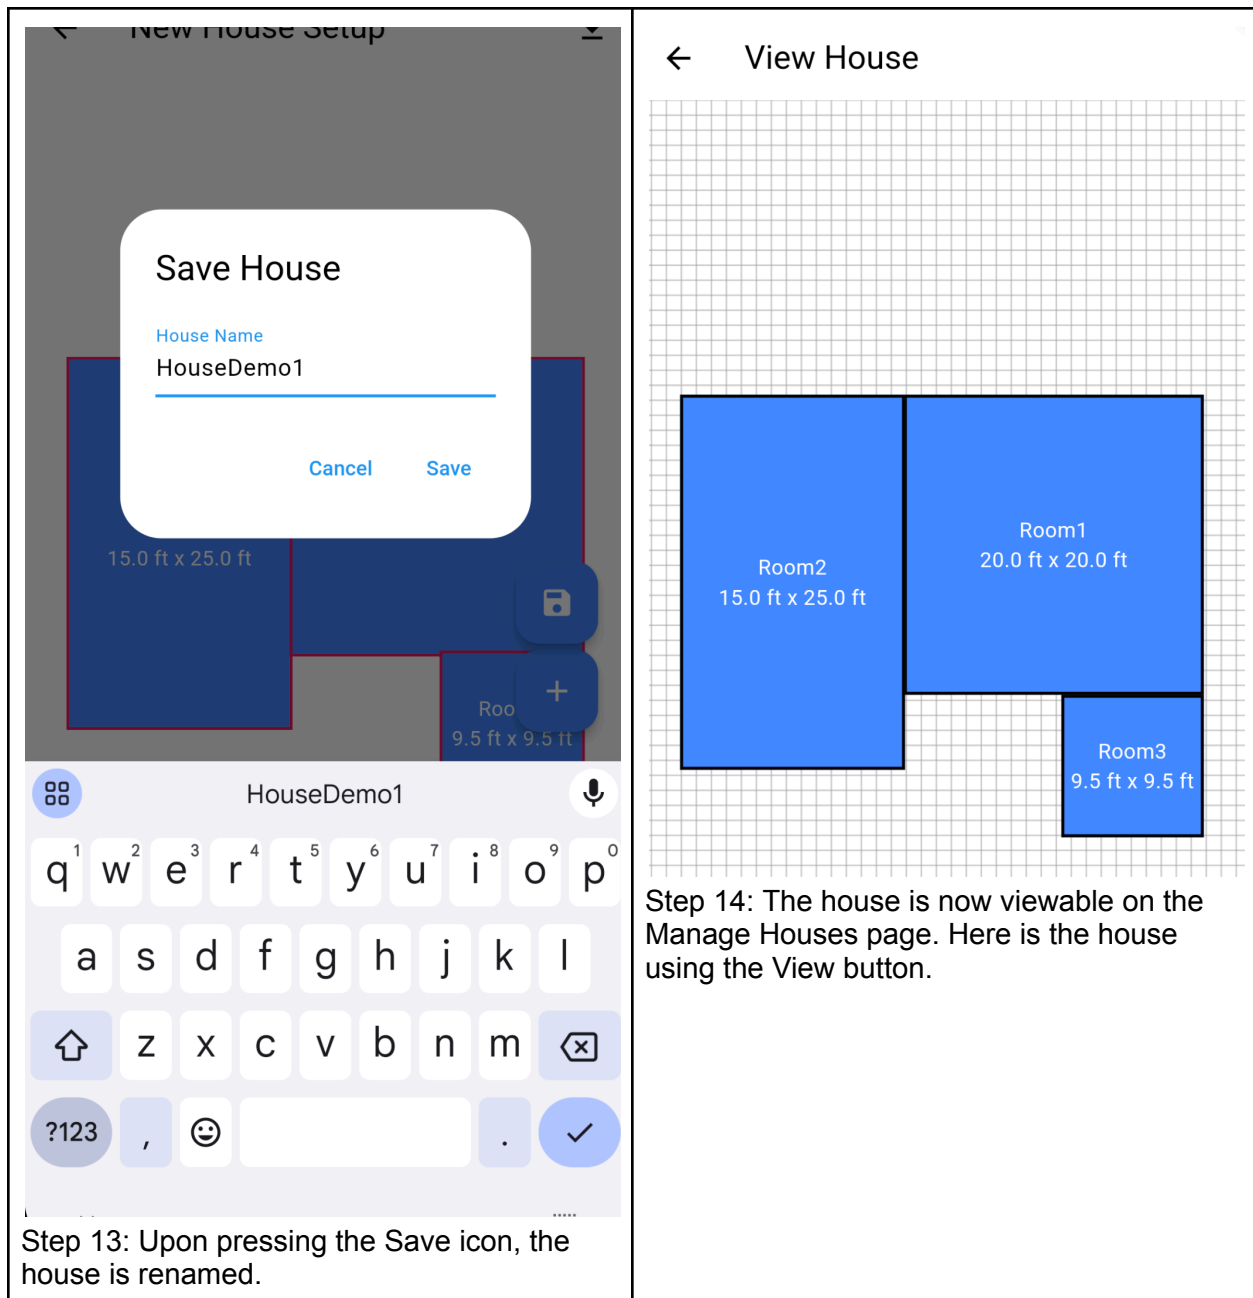

Left Screenshot (Step 9): A menu is open at the bottom of Room2. The menu has a header 'Connect to Room' with a chain-link icon. Below the header are four options: 'Attach to Left Wall', 'Attach to Right Wall', 'Attach to Top Wall', and 'Attach to Bottom Wall'.

Right Screenshot (Step 10): The menu is open at the bottom of Room2. The menu has a header 'Connect to Room' with a chain-link icon. Below the header are three options: 'Resize Room' with a square icon, 'Edit Room Name' with a pencil icon, and 'Align Top of left Wall' with a square icon. Below this is another option, 'Align Bottom of left Wall'.

Step 9: The options for which side of Room1 to stick Room2 to. The left wall will be chosen.

Step 10: The options for which edge of the left wall to stick Room2 to. The top of the left wall will be chosen.

Manage Client/Server Page

The client/server database page is on the application for development purposes. It attempts to connect to a docker containing a test database.
